

Plasmid Purification Magnetic Beads (RNA Depletion)

Removing RNA Contaminations from Plasmid DNA

The **Plasmid Purification Magnetic Beads (RNA Depletion)** combines BioDynami's proprietary chemistries with the reversible DNA-binding properties of magnetic beads. The reagent removes RNA and recovers the plasmid in the same step. Moreover, unwanted components such as salts, dNTPs, proteins, enzymes, and other impurities can also be removed simultaneously.

1 step for **2** reactions:

Removes RNA &
Recovers plasmid

Simple & Fast:
Beads-based protocol

Features

- Effective depletion of bacterial RNA by RNase
- High recovery rate of plasmid DNA by magnetic beads
- Removal of unwanted components and impurities
- Simple and fast beads-based protocol

Product Name	Cat.#
Plasmid Purification Magnetic Beads (RNA Depletion)	40059
