

miRNA Purification Kit (tRNA Depletion)

Purify miRNA by removing tRNA, 5S RNA, and larger RNA contaminations

microRNA (miRNA) isolated from commercial miRNA extraction kits usually contain contaminations of tRNA and other larger RNA molecules. The **miRNA Purification Kit (tRNA Depletion)** is developed for miRNA purification by removal of tRNA, 5S RNA, and other larger RNA contaminations. The magnetic beads can also remove impurities and unwanted components such as salts, proteins, dNTPs, and detergents.

Features

- Purification of miRNA by removing tRNA, 5S RNA, and larger RNA contaminations
- Remove unwanted components and other impurities

Purify
miRNA

Remove
tRNA
5S RNA
Larger RNA

Kit list	Cat.#
miRNA Purification Kit (tRNA Depletion), 24 runs	40057S
miRNA Purification Kit (tRNA Depletion), 96 runs	40057L
